Product Description

Water Tank 1.2L Desktop UV Peliter Dehumidifier With 2 Speeds

The semiconductor mini dehumidifier is a small, portable appliance that effectively manages humidity in confined areas. It features a built-in semiconductor module that functions as a heat pump, drawing in moist air and condensing the water vapor on a cold surface. The condensed water is then collected in a removable reservoir or drained continuously, depending on the model.

This type of dehumidifier is energy-efficient and silent in operation, making it suitable for use in bedrooms, offices, or any space where noise and energy consumption are concerns. It often includes additional features such as an automatic shut-off when the water tank is full, and some models may also have adjustable humidity settings to customize the drying level according to specific needs.
